

Bundesdruckerei GmbH – Data trustee platform with a trust center service on demand

A data trustee is an independent trusted authority that transfers data between the data provider and the data user securely and in compliance with the law.

1. We offer the following services from the Trusted Partner portfolio:

Selection	Category
	a) Ideation and business development
	b) Hosting and operation
x	c) Integration and data management
	d) Software development

2. Why are we the ideal Trusted Partner for you? How do we stand out from the competition?

In order for a data trustee to be accepted as an independent institution, especially by data providers, it must be independent vis-à-vis third parties and must not have any vested interest in the data to be managed. Bundesdruckerei GmbH with its data trustee platform CenTrust meets these requirements – with quality and reliability ‘Made in Germany’. That’s because the data is hosted and processed in Bundesdruckerei’s high-security infrastructure. What’s more, we comply with all the requirements of the GDPR both at national and European level.

3. What experience and references do we present in the offered service?

Bundesdruckerei GmbH is already successfully supporting medical research projects. We operate a trust center for the Robert Koch Institute (RKI), for instance, acting as a reliable data trustee for the transmission of medical data of HIV patients from 15 different clinics for research purposes. As part of the projects supported by the Innovation Fund of the Federal Joint Committee (G-BA), we support the Germany-wide Multiple Sclerosis Registry with our trust agency service by linking health insurance data with registry data for research purposes. We are also the trust agency for RKI when it comes to digital vaccination rate monitoring for COVID-19 vaccination.

In the next phase, we would also like to make our offer available to the mobility sector and provide customer solutions together with partners.

4. Service Description

Much like a notary, a data trustee is an independent trusted authority that transfers data between the data provider and the data user securely and in compliance with the law. In doing so, the data trustee ensures compliance with the following principles:

Transparency and sovereignty: The data provider knows exactly who uses or wishes to use their data and when. The data provider decides who is to receive which data.

Pseudonymization and anonymization: Where necessary, data is pseudonymized or anonymized and made available to users. This ensures that no conclusions can be drawn regarding the respective individual.

Authorization and access management: Unauthorized persons cannot access the data provider's data at any time. The authorized data user only receives the data that has been released for this user.

Monitoring and logging: All activities on the data trustee platform are recorded and monitored. The data provider keeps track of who uses what data and when.

5. Scope of Services

Individual consulting based on project requirements upon request.

6. Pricing

Individual consulting based on project requirements upon request.
