sovity – The easiest participation in Mobility Data Space through technology and expertise

The managed services by sovity enable you to participate in Data Spaces easily and cost-effectively. sovity supports you with the Connector-as-a-Service and expertise.

1. We offer the following services from the Trusted Partner portfolio:

Selection	Category
	a) Ideation and business development
x	b) Hosting and operation
x	c) Integration and data management
	d) Software development

2. Why are we the ideal Trusted Partner for you? How do we stand out from the competition?

The Fraunhofer spinoff sovity has been working with data space technologies for years and provides its expertise bundled in easily usable software products. The Connector-as-a-Service enables the easiest, fastest, and most cost-efficient participation in Data Spaces like the Mobility Data Space or Catena-X. Within minutes you gain access to sovereign data exchange in a user-friendly solution without having to worry about the underlying technology. sovity's products are based on open-source software components such as the Eclipse Dataspace Connector (EDC).

After precisely gathering your requirements sovity provides the right technology and expertise for your participation in a Data Space. Thus, you always receive the right managed service for the respective ecosystem at the current state of open-source software. You are also supported with integration of your data sources to participate seamlessly in sovereign data exchange within Mobility Data Space.

By this, you gain the freedom to focus your valuable IT resources on the implementation of use cases and your core business instead of tying them up in the setup and operation of Data Space technology. sovity enables you to use Data Space technology without in-house expertise.

Furthermore, sovity is an expert in building and operating entire Data Spaces based on technologies such as International Data Spaces and Gaia-X. With sovity, customers receive the entire Data Space expertise from a single source.

Are you planning to enter a Data Space, or do you need help connecting partners to a use case? Then feel free to contact us and let us jointly turn your data and sovereignty-based use cases into reality within shortest time!

3. What experience and references do we present in the offered service?

sovity's leverages its years of expertise of developing and applying Data Space technology at Fraunhofer and international data spaces association to provide leading products for its customers. Its expertise allowed sovity in 2022 to be the first company worldwide to make a productively usable connector available at the push of a button and consequently radically lower the barrier to data space participation.

The company serves customers of various industries and sizes as well as on different continents. sovity supports the Mobility Data Space with the development of the MDS connector, is the official maintainer of the open-source GIT repository of the Data Space Connector (DSC) and contributes to various Data Space projects. With its products, sovity already connects companies to various Data Spaces (e.g., the Automotive Network Catena-X and the Mobility Data Space). The technology pioneer has a strong network in industry and research. Find out what customers and partners say at https://sovity.de/about/ .

4. Service Description

Connector-as-a-Service (CaaS): To participate in the sovereign data exchange in the Mobility Data Space, a so-called connector is required. sovity provides the connector as a managed software service in the Connector-as-a-Service. This gives participants access to a fully configured Connector for participation in the MDS, which is controlled via a user-friendly web interface and available within minutes. Using powerful middleware, a variety of different data sources and formats can be connected to the CaaS. With the CaaS, customers can start creating and consuming data offers within shortest time. sovity continuously takes care of operation and maintenance of the connector, so that an up-to-date and compatible data exchange is given at any time.

5. Scope of Services

Connector-as-a-Service (CaaS): With this service customers gain web-based access to a hosted, configured, permanently maintained Connector, integrated with the central components of the MDS. The Connector can be provided within minutes, enabling data exchange in the MDS in shortest time. This service is provided as a subscription that is flexible in terms of time and defines various performance parameters (for example, data volume or SLAs).

6. Pricing

The Connector-as-a-Service is provided based on a monthly subscription fee, which is determined according to customer requirements. Performance parameters such as helpdesk and service, feature set, data storage, security levels or SLAs are taken into account. After determining your requirements in a short initial meeting, sovity will provide you with your individual price.
